Mt Prospect, IL 60056 | (872) 985-4876 | timkhalet@gmail.com | artkha1.github.io/portfolio

EDUCATION

University of Illinois at Urbana-Champaign

Expected May 2027

B.S. in Computer Science, Minor in Statistics | Cumulative GPA: 4.0/4.0

EXPERIENCE

Data Science Intern | College of Business Data Science Research Services, Urbana, IL *Sep 2026 – Present*

- Engineering a financial data pipeline that transforms 27 years of SEC filings into a structured DuckDB warehouse, replacing a paid third-party provider and reducing recurring data costs
- Developing an AI research agent that answers natural-language questions over SEC filings with source attribution, enabling researchers to query financial data without SQL

Ground Data Systems Intern | NASA Jet Propulsion Laboratory, Pasadena, CA *Jun 2026 – Aug 2026*

- Updated and validated Python-based ground support tooling spanning 20 mission tools across 4 active Earth science missions, ensuring Python 3.12 compatibility and software security compliance
- Designed and built shift-left testing infrastructure using Jenkins, Robot Framework, GitHub Actions, and TestRail, catching defects earlier in the development cycle and reducing regression risk across mission tooling
- Authored internal documentation on testing best practices, adopted by the team to standardize test design and CI/CD workflows for current and future missions
- Conducted data gap analysis and built a tuning architecture for a machine learning anomaly detection model supporting satellite telemetry, improving F1 score by 13% and reducing false positives by 25%

Science Data Systems Intern | NASA Jet Propulsion Laboratory, Pasadena, CA *Jun 2025 – Sep 2025*

- Built a Python reporting and visualization pipeline to verify completeness of incoming datasets for the Surface Water and Ocean Topography (SWOT) mission
- Refactored and optimized existing data reporting tools, achieving up to 5x performance improvements
- Queried and processed cloud-hosted satellite data products using AWS Elasticsearch and the HySDS framework
- Adapted Terraform infrastructure for automated cloud cost projection and mission-specific resource planning

Data Analytics Engineering Intern | University of Chicago Urban Labs, Chicago, IL *Jun 2024 – Aug 2024*

- Built a Python package to benchmark an internal geocoding tool against the US Census Bureau's geocoder API across 1 million sampled US addresses, improving performance evaluation
- Orchestrated dependency-based, multi-step data pipelines using Slurm and Submitit, automating distributed job execution
- Automated geospatial report generation and presented findings through LaTeX, Jupyter notebooks, and slide decks, delivering actionable recommendations for decision-making

Data Analysis Micro-Intern | Haitian Global Health Alliance, Remote *Aug 2023*

- Cleaned and validated survey data on attitudes toward violence against children in Haiti for statistical analysis
- Built 7 interactive Tableau Public dashboards comprising 19 charts, enabling detailed exploratory data analysis

Information Technology Intern | Aneyeon, Inc., Remote *May 2022 – Jul 2022*

- Built a college recommendation web application using Python Flask
- Led end-to-end development including front-end design, user authentication, third-party API integration, and database architecture on Microsoft Azure SQL

SKILLS

Programming Languages & Frameworks: Python, R, SQL, Flask, FastAPI, pandas, geopandas, scikit-learn, Ray

Data Engineering & Cloud: Apache Airflow, PySpark, Databricks, AWS (Elasticsearch, S3), GCP (Cloud SQL, Cloud Run)

CI/CD, Automation & LLM Tools: Jenkins, GitHub Actions, Terraform, Slurm, Claude Code (Hooks, MCP)

Visualization & Reporting: Tableau Public, Power BI, Jupyter, LaTeX

Languages: English, Russian, Ukrainian
